

SW Developer- Ground Stations

Job Description

We are looking for smart, fast learners with a passion for programming and proper development methodology, to join VisionMap's Ground Systems software team. If you believe in DRY, are allergic to NIH and have experience in defensive and testdriven development – we want you.

Join our Ground Stations SW development team and be a significant player in developing exceptional online mapping applications for both civil and military fields.

- Programing in C# and C++ (Windows environment)
- Design, implement, test and validate SW systems
- Research for new innovative tools and tecnologies
