Locating Hidden Objects

SCAN
VisionMap airborne imaging systems collect high resolution, high sensitivity thermal images of the road.

DETECT
The system processes the imagery, revealing objects camouflaged onto the roadside.

TARGET
The system provides ground forces with full resolution images and exact coordinates of the objects of interest, so they can be safely neutralized.
The Information You Need for Informed Decisions

- Quick daily capture of thousands of km\(^2\) of roads
- High thermal sensitivity reveals objects hidden on the roadside
- Lightweight payload for manned aircraft or UAVs
- Operational and battle-proven systems

Problem

Objects are hidden on the roadside.

Solution

VisionMap systems’ high thermal sensitivity uncovers the objects.
